EXAMPLES: # Use the help screens # gvma help # /? # Search for a string # gvma -s "mystring" # Searches until the next occurrence of "mystring" # gvma -sd "mystring" # Different line. # gvma -sd "mystring" -d'mystring' # Find a string within a file # gvma -s -c /path/to/myFile # Tail around a line # gvma -sd -t 10 # Tails around the line that contains "Tail" #####

#####

What's New In?

-w s or --width=s : Width to set the output window width to. If negative, the default width. See the `man strftime` for more information. If not specified the output width will be 128, ie 7 lines. -P or --path=s : The full path to the file you wish to tail. -t or --tail : If it is not given then output will be tailored with the output start and end lines from the file. If it is given then output will be tailored with the start line from the file and the end line, defaulting to the end line of the file. -f or --follow : Follow when listing the files in the directory. -h or --help : Print a summary of all the options. -n or --lines=s : Number of lines of the file to output. This is a required argument. -m or --matches=s : Number of matches for --follow. This is a required argument. -i or --index=s : Index of the line to output. This is a required argument. -u or --user : Show user of program. -c or --commands : Display the last commands. -s or --short : Print the first 8 characters of a line. -d or --details : Show the last 30 seconds. -D or --details2 : Show the last 5 seconds. -l or --list : Show the command list. -r or --recursive : List the contents of the current directory. -p or --prefix=s : A prefix to use when listing directories. -P or --pretty : Print the output in an easy to read format. -v or --verbose : Make the output more verbose. -c or --config : If there is a file that specifies configuration values, then this option will use that file instead of the default. This option can be used any number of times. -p or --prompt : Prompt for the next command. -q or --quiet : Silence the output. -t or --truncate : Truncate the output to the given length. -f or --format=s : Show the output in the format s. This option can be used any number of times. -x or --timestamp : Show the timestamp from the last program run. -A or --date=s : Show the timestamp from the last command run. This option can be used any number of times. -M or --more-info : If there is a man page on the command, then print out a synopsis. --help

System Requirements:

The graphics engine may work in many, many different configurations. •Some settings are independent of the resolution, and are not related to anything on the CPU/GPU side. •Most features are for FOV and screen-resolutions of 6400x1200 (32 inches, 16:9 aspect ratio), and any other resolution is possible, depending on the graphics settings. •Normal settings will also provide smooth frame rates for some other settings. •Some of the settings are related to specific graphics cards, while some have more or less
