Resource Translation Toolkit is a simple to use tool especially designed to help its users translate PO, RC, RESX and properties files from one language to another. The application features full Unicode support and enables translation to Asian languages. Resource Translation Toolkit does its task by using a TMX or POT format Translation

Memory that contains unique translated strings and generates translated assemblies, catalog files or DLLs. Resource Translation Toolkit Screenshots: Visit our website at www.mas2d.com and see our other products. Feature Highlights: Unicode support TMX and POT support Asian languages support POT and TMX Translation Memory support Catalog file and string archive support Translated

DLLs support New localization support Translation of po/rc files and properties files and for database support for SQL server History At the beginning in April 2003, Mas2D has published the first version of Resource Translation Toolkit that made the first steps on the road that resulted in the current version. On August 28, 2003, the first public version of Resource Translation Toolkit was released. The version was

not available in the MAS2D website. At that time the translation module could only work with the Debug version of the software and the files could not be saved to the disk. On September 10, 2003, the first version of translated catalog file and string archive support was added. This feature was for the first time made available to the public and allowed to configure the translated catalog file, even from a disk. On December 22,

2003, the first version of the catalog file and string archive support was released as a separate version which could be downloaded at www.mas2d.com. This version was not published on the MAS2D website. The new feature was requested to the users because the manual process of the translation needed to configure the translation for all the application languages to work properly.

Before this version of catalog file and string archive support was released only the version was published on the website. On February 3, 2004, the second version of the Resource Translation Toolkit was released and was available for the public at www.mas2d.com. The application was available in English, Spanish and Japanese languages. These languages were selected because we wanted to give our users the opportunity to

have the software translated into these languages. On February 19, 2004, the first version of translated DLLs support

What's New in the?

Resource Translation Toolkit is a simple to use tool especially designed to help its users translate PO, RC, RESX and properties files from one language to another. The application features full

Unicode support and enables translation to Asian languages. Resource Translation Toolkit does its task by using a TMX or POT format Translation Memory that contains unique translated strings and generates translated assemblies, catalog files or DLLs. Resource Translation Toolkit Features: *

- * The application features full Unicode support and supports translation to Asian languages. *
- * The application does its job by

using TMX (Translated Memory eXchange) format Translation Memory that contains unique translated strings and generates translated assemblies, catalog files or DLLs * The generated compiled assemblies, catalog files or DLLs can then be deployed to any Windows
